

## **Lennox Humidifiers Take the “dryness” Out of Winter**

**Colder weather means dry air. Dry air is not only an annoyance—it can be a hazard to your health and your house. Dry air can cause chapped skin, aggravated respiratory ailments, static shocks, dried-up houseplants, out-of tune musical instruments, cracked and warped furniture, separations in wood floors, and gaps in moldings. When the air is dry, it feels colder. Therefore, higher energy bills may result from turning up the thermostat to compensate for the dry air says Ron Postma, Owner, Postma Heating and Cooling.**

**The Lennox Healthy Climate™ humidifiers—the WP2-18 power humidifier and the WB2-17 and WB2-12 bypass humidifiers—provide an easy solution to dry air in the home. For 105 years, Lennox has earned a reputation for creating indoor climate solutions for homeowners and businesses looking for the best in comfort and innovative design. Lennox continues this tradition with its new line of Healthy Climate humidifiers.**

**Unlike many other humidifiers, which are portable, the Lennox humidifier is part of the central heating system. It is installed into the ductwork, right beside the furnace. These humidifiers have a humidistat, which senses moisture levels and adjusts to the desired level automatically—like a thermostat controls the temperature. The homeowner selects the desired amount of humidity. If the humidistat detects a low level of humidity, the humidifier releases moisture, and it circulates through the home while the heat system is in operation. The humidifier’s flow-through design introduces moisture into the home’s dry air through a more natural and healthy evaporative process.**

**Lennox has developed an entire line of Healthy Climate products, including air filters and electronic air cleaners, which are available to sell individually or with a complete system. All of the Healthy Climate humidifiers come complete with a one-year components limited warranty.**

**"There are many companies making varied claims about their indoor air quality products. But for products you can rely on, Healthy Climate solutions come from the company consumers have put their trust in for years," says Postma.**

**To find out more about Lennox Healthy Climate products, call Postma Heating and Cooling at (519) 354-9491 or visit us online: [www.postma.ca](http://www.postma.ca). Postma Heating and Cooling has been providing service in the Chatham-Kent area for 23 years.**
